

Press Release, April 3rd, 2017, Oslo, Norway

Strongcrete winner of the Malmö Cleantech City Award 2017!

Strongcrete was awarded with the Malmö Cleantech City Award at the ceremony at Cleantech Capital Day in Oslo. This was the third time that this Award has been handed out in cooperation of Cleantech Scandinavia and Malmö Cleantech City.

The selection has been made from participating companies in the Nordic Cleantech Open by a jury with representatives from the construction and real estate sector. The purpose is to put a spotlight on cleantech innovation to support the transformation of the sector in a resource efficient direction.

Strongcrete provides the next generation technology that will improve the quality and give you more resistant horizontal concrete surfaces. They compact the wet concrete from above with a machine – a kind of a light roller called RolliT RoboT. The RolliT RoboT enables you to re-compact concrete earlier in the process and reduce pop ups, delamination or cracks. Both the strength and durability of the surface is improved and you will avoid expensive repair work in near future. The method also reduces the cement powder mix with 20 %, which is equal to 20% of CO2 emission since cement production is one of the biggest contributors to CO2 pollution globally. The method is also very worker friendly avoiding heavy working

moments used in traditional production. The technology has been patented in many countries. It works both in warm and cold climate. Many reference projects from different sites are ready to inspect.

The official motivation: *"An elegant innovation based on years of practical experience. This solution has multiple environmental, economic and health benefits and it is modern and easy to apply. We think that this solution has great market potential, will be widely used in the construction industry and will concretely improve the industry."*

The Award was given to the Founder Yngve Alvarsson and his son Stefan Alvarsson. The company will receive a full demo-day, which gives a great opportunity to showcase the solution to the market, organized by Cleantech Scandinavia and Malmö City. The winners also received recognition, flowers and a glass sculpture from the famous glass artist, Christian Svensson.
