CLEANTECH SCALEUP INVESTOR MEET-UP

[ON A SOLAR-POWERED EVENT SHIP]

[REGISTER HERE](#)

March 18th 2026 | 3pm-7pm | Alt-Moabit 91 Berlin

You're invited to an exclusive investor gathering and cleantech scaleup pitch event onboard the Seminar ship Orca ten Broke. We are bringing together around 50 active investors and 10 Swedish and German scaleups with game-changing cleantech innovations for an intimate boat ride with pitching, networking and high-quality dialogue.

15:00 Arrival and coffee

15:30 The ship departs from Alt-Moabit 91. Opening words by the Swedish and German Energy Agencies

15:45 Scale up pitching and VC Q&A (see companies and investors on page 2)

17.30 - 19.00 - Relaxed mingle with drinks and snacks
(The ship returns to Alt-Moabit 91 by 18:00)

**Swedish-German
Cleantech Platform**
A business accelerator from the Swedish Energy Agency

Investment Accelerator
An investment programme from the Swedish Energy Agency

PITCHING COMPANIES

MARCLEY is a full-service solar infrastructure platform focused on unlocking distributed energy generation in multi-family residential buildings.

Enjay transforms industrial energy savings into recurring revenue portfolios with their patented tubular heat exchangers, purpose-built to recover waste heat from contaminated exhaust air.

Emulate Energy provides a SaaS white-label solution to mid-sized electricity utilities giving them the opportunity to directly monetize their end-customers behind-the-meter assets on the electricity markets.

Meva Energy is a Swedish cleantech company developing modular biomass gasification systems that convert agricultural and forestry residues into renewable syngas.

Modvion develops wind turbine towers made from laminated wood. Their patented modular system enables wooden structures that are stronger than steel and concrete and carbon negative.

Mat4Green Tech is a materials platform with a patented production process that increases material recovery and cuts emissions and costs dramatically. Their first market is ITO – a critical material for solar cells and electronics.

EcoPals transforms waste plastics into sustainable asphalt additives, enhancing road performance and reducing CO2 emissions.

Cyclize specialises in plasma technology, replacing fossil feedstock with plastic waste and CO2 exhaust gas to enable a carbon circular economy.

Zählerfreunde is an energy management platform that empowers users to save energy and costs while promoting sustainability through smart metering technology.

Graphmatech produces graphene-infused materials that increase performance, resource efficiency, and sustainability in a wide range of industrial processes.
